## HOW TO PLAY THE HAY DAY AN INTRODUCTION

In Hay Day, players are presented with their in-game old farm and are tasked with bringing it into the modern age by growing crops, rearing animals and selling products. While the theme is very conventional, the execution, focus on production chains and touch-friendly interface set.

Hay Day's biggest change to the conventional farm game formula comes in the way it is controlled. Rather than endlessly tapping on items and, optionally, expending energy for the privilege of doing so, Hay Day instead uses a "swipe-based" interface whereby players tap on the object they would like to interact with and then swipe a tool over all of the instances they would like to do something with. For example, when harvesting crops, players simply have to tap and drag a sickle tool over all their fields to harvest them in a matter of seconds there is no tapping and waiting for unnecessary progress bars to fill here.

Another twist on the formula comes in the way all of the farm's elements interact with one another. Rather than all produce being treated as "cash crops," immediately turning into money the second it is harvested, crops and animal products go into a player's storage. The player then has a number of different options for what to do with them.

That can be sold directly to characters who come visiting the player's farm or they can be used with special buildings to create more advanced products like milk from a cow can be turned into cream, they can be sold to other players; or they can be used to fulfil orders.

Trading with other players unlocks at level 7 and allows players to put items up for sale in their roadside shop. Players can set the price and choose whether or not to advertise in the local paper. If they do, their products and the price will appear in other players' mailboxes each day, while if they don't their products will only be available for sale to friends who visit them. This is an excellent feature, since players can not only put up crops and other produce for sale, but also tools. It helps get around the inherent illogicality of most social games whereby players can send items they don't possess to friends in order to "help". Here, players can trade items in a much more realistic manner than usual, giving a much greater sense of realism and requiring far less suspension of disbelief.

The game monetizes primarily through its hard currency, used to speed up time-sensitive actions. Soft currency may also be acquired via in-app purchase. Purchasing coins will help the player progress quicker as the game is relatively tight-fisted with the amount of money it gives out at a time, requiring the player to work for their cash rather than awarding it in vast quantities. One thing is, the game never feels unfair it is perfectly possible to have a satisfying experience without spending any real money on the game.

Social integration is provided solely through Facebook connectivity. There is no means of adding friends without using Facebook, which is a blow to those who prefer to use proprietary game accounts to maintain their privacy. The game also supports Game Center but at the time of writing does not appear to include any leader boards or achievements though the latest update promises the possibility of "earning Achievements to build a bigger home."

When compared to the multitude of other farming games that have come and gone over the years, the biggest attraction within Hay Day is the game's unique use of gesture based controls. You'll complete the basic farming tasks found in most games, like planting and harvesting crops, and even feeding and harvesting animals, but won't be subjected to constant tapping on individual farm plots, or even on individual animals to interact with them. Instead, you'll tap on one tool and can then drag your finger over all appropriate items to see the game respond with smooth, responsive animations. This eliminates the need for clumsy farm vehicles and saves time in both the long and short term, which is definitely a good thing.

As you collect resources, you'll need to use them elsewhere in your buildings, creating goods to sell in your Roadside Shop or those that can be used to fulfil requests on your farm's bulletin board. You can even trade goods with others via GameCenter and Facebook connectivity. Once you reach a certain level, you'll be able to chop down trees or remove rocks from your farmland in order to use that space for other things (say, a new animal storage structure or even some decorations), but many of the in-store items are level-locked, leaving your progress to be incredibly linear, as one major element unlocks after the other without much freedom. Once you've unlocked a feature, you can interact with it as often as you like. The same can be said for the game's overall depth. While using milk to create butter and cheese, or using wheat to produce baked goods adds an element of complexity to the experience, these tasks simply require you to set the production into motion and then wait a few minutes or hours for them to finish.

Planting crops is done largely the same way. Tap on an empty plot, and then on one of the available crops, you can then drag the crop around the plots until all of the empty plots have seeds planted in them. Once a crop fully grows, it will multiply the supply you own, so you will always be making money on each crop you plant. Always make sure to have crops growing, even if you won't have time to harvest them for a while.

You can customize some of the buildings that are around the farm. The farmhouse can be painted by tapping on it, and then on the paint brush icon. Dragging the icon over the house will completely paint it, giving it a fresh look in the process. You can then take these painting skills and use them in several of the buildings scattered throughout the farm. If you don't like the colour or look of some of the buildings, try painting them as an alternative.

Having barnyard animals on your farm is a crucial point of success, so let's go over how to buy them. There will be an animal pen located on your farm. Tap on it to access the animal store menu. From here, there will be various tabs you can pick from with plenty of items to choose from. In the animal section of the store, you can purchase several different types of animals including chickens, cows, pigs, sheep and more. To buy an animal, tap on it in the store and then drag it to the animal pen. This will buy the animal and place it in your pen automatically.

Simply having animals is just one aspect necessary to keeping animals and also you have to feed them to keep them around. To feed animals, tap on the hut within the pen.

From there, you can tap and drag on the feed to feed it to your animals. When your animals are fed, they are more likely to produce eggs and be happier in the process.

Chickens will produce eggs for you, but it will take time to complete. If you do not wish to wait for chickens to lay eggs, you can speed up the process using Diamonds.

When the eggs have been laid, you will need to collect them with the basket. You can access and use the basket from the hut inside the pen just as you did with the feed and then drag it across the chickens to collect the eggs.

One of the things you can create baked goods in the bakery with help of collected eggs from your farm. Once the bakery has been placed, you can drag bread into it so that it can bake it and create XP and coins that will allow you to enhance your farm in the future.

Another additional way to make money is via the delivery truck. The billboard that can be found on your farm will have orders available on it. When you tap on the bulletin board, you can then tap on any of the available orders to complete. These orders will require you to have certain items on hand that you can then sell to your client

## Advance levels

To advance levels, you need experience points. To get experience points, you can harvest crops, collect goods from animals, complete deliveries, sell to visiting customers, and many other ways! The more levels you advance, the more features of the game will be available!

- Think and use your money (not Hay Day money). It may be tempting to purchase more diamonds and money, but you shouldn't buy too much.
- Make a lot of food for your animals and have it ready for them. This way you won't have to wait for food to be made while your animals are hungry.
- Make use of the diamonds. They do allow you to speed things up, but using them too much can lead you to having less and less.
- If you travel too often, it could mess up your time shown on your system and could mess up your game if you try to change it back!
- Don't assume that visiting customers will always want something for a low price.

Watch out for foxes. They might eat your chickens. It's better to be safe than sorry, so whenever you see one, tap it repeatedly until it leaves.

You created a large farm to use. You will take care of pets such as chickens, cows, as well as a sheep; also you will plant and collect plants including wheat and corn. You'll manage to numerous duties which will go in maintaining a grade-A farm.

The critters have to be given food as well as your silo has to be decorated, for instance. Sometimes guests from city or another farm will drop by, giving you duties or cash on your ware, such as eggs and bread

The best ability discovers may be the graphic designs. Unique, stunning elaborated, together with its landscapes, zooms as well as the pan. Hay Day's appearance is reasonably motion picture for just a mobile game. The buttons are likewise smooth, non-intrusive, and make use of an iPhone's screen properly.

Replay worth is available in the form of accomplishments. Press in your home to see each of the accomplishments you've opened: Gather hundreds of eggs for Egghead, or get plenty of milk from the cows. As the collection goes, you must stand by when your farm's goods are available to be gathered and traded.

It might take several minutes for wheat to rise, or perhaps 30 minute for cows to provide milk. You are also able to boost the procedure by making use of diamonds, in case that you've got small amount, but could find more all over the gameplay.

One specific characteristic may be the trade factor between gamers. Real individuals can publish advertisements from the paper to be able to promote their items for some other gamers. It's a Neopoets-like method that links gamers together with their stores, that provides a social factor the game play doesn't have usually. There's also computer players that regularly appear on the farm who'll need it or market items.

# Tips and Cheats

It's fun to produce and sell your own mobile produced goods and trades and plenty of more farm-owned items with your best friends. So you want to become the best farmer the world of Hay Day has ever seen? Here are some tips and cheats.

## *1. Diamonds can be used to Speed up the Production*

Hay Day is a game that takes plenty of personal (and financial) investment from dedicated players. Some folks may grow tired of the game's slow progress while others may find that aspect of the game more fitting for their play style. For those of you who wish to speed things up a bit more, you're going to have to sacrifice some Diamonds. Tap on any item or animal that you want to get farther along, click on the lightning icon and use your Diamonds to speed up the process.

## *2. How to get Diamonds*

Coins may be one of the main in-game currencies you rely on to get you by, but Diamonds really are the most valuable form of money the game offers. Every time you level up or have a successful fishing trip, you'll come into contact with a few Diamonds for your troubles. Go ahead and sync your Facebook account with the game so you can nab some free Diamonds, too. Diamonds need to be bought with real world dough, but you save your money by mining for them at level 24. SuperCheats.com went ahead and listed some of the many ways you can get your hands on those oh-so-valuable Diamonds. Every time you level up, you will receive 1 or 2 Diamonds. This will become the staple of your diamond supply, so is not to be sniffed at. You receive 1 Diamond from following Hay Day on Facebook. - Log-in to Facebook using Hay Day to get 5 Diamonds - You can get 2 free Diamonds for discovering a movie ticket and watching a 30 second trailer for another game.

Diamonds are unearthed randomly when you search through mystery boxes. You can get Diamonds through mining once you reach Level 24.

Complete an achievement to earn a Diamond. Finally, enter competitions from Supercell when contests are held on their Facebook page

### ***3. Get Extra Coins by Selling Some Goodies***

So now you know how to pack your digital wallets with Diamonds. Now here's one method that's sure to increase your Coin intake take a peek through other farmers' newspapers. When you spot some construction equipment like dynamite, purchase them in bulk. Since you'll be selling them soon, pay attention to this next step sell each of the items you purchased in bulk between 180 and 220 coins a pop. Selling off these items should get you some extra coins in the long run. For the final item being sold, advertise it. Once folks take a trip to your in-game store, that ad will make all of the items you're selling public.

### ***4. Search for Building Materials***

Building materials are needed to upgrade your storage space in your barn and silo. You can access some new building items while you're out on the fields and taking care of your animals. Those Mystery Boxes that pop up every so often during gameplay are also good for finding building materials. You can also cop some Mystery Boxes with your Diamonds if you choose to.

### ***5. Always keep a look with Your Animals and Crops***

Once you finally start to comprehend the concept of your farm animals and crops, everything will start to mesh well as far as your game progress is concerned.

## ***6. How to maximize your crops and animals:***

Try to stay on top of how crops and animals depend upon each other, so that you can optimize your farming strategy. You want to be able to keep animals fed, so that they can produce key goods, but you'll also need some of that feed to make more complex items for the market. It makes sense to expand your farm evenly between crops and animals so that the balance is always maintained, and you're never left short of something you need. So you've built an animal pen in Hay Day - now what? Animals won't magically appear in any pen you create, instead you'll have to tap on the till icon, then drag the appropriate animal into its housing area. Once it's settled into its new home, you'll have to feed it before it'll start creating its own produce.

## ***7. The Purpose of Cats and Dogs***

Hay Day introduces a couple of new domesticated animals to owners. When the cats and dogs came in one of the new updates people was unsure what they were actually for. You can buy the cats and dogs with vouchers. You gain vouchers from completing boat and truck orders or harvesting crops and treasure box. You cannot trade them. When you have enough vouchers you can buy your cat or dog, but before you do this you must buy a cat or dog house. Your cats and dogs will need feeding, milk for cats and bacon for dogs. Every time you feed your pet you will get 30 xp. They only feed every few hours. Apart from the xp they are mainly a decorative purpose for your farm, or for some players, it is an achievement getting each individual pet.

## ***8. Few extra free items***

There's a pretty easy way to pick up a few extra items for free. Buy a lot of wheat until your silo is full. Plant half of them then turn your device up right and shake it while cutting down wheat. You will get free items.

## ***9. Bonuses with Mature Crops***

When any of your crops fully mature, you won't get any more substantial benefits from the patches of land they're planted on. Keep an eye on your crops so that you won't have patches packed with fully grown crops that aren't worth keeping around anymore. Tap on the field with the mature crops, access your sickle and proceed to sweep those crops off the field immediately. Drop some new crops on that field to begin the process all over again and get some new essential bonuses.

## ***10. How to maximize the space***

A few essential tips on how to maximize the space on your farm land: For more space, you can either use the shovels, axes, saws, dynamite and TNT to remove pools, small and large trees, small or large stones, or you can wait until you get the small boy to buy those items for you. For these, you'll have to collect the items that sometimes just pop up from the harvesting of anything that can be harvested, including your animals works. If you ever sell some of these items, always sell to the highest price possible.

## ***11. What is valuable with Tomatoes?***

Some crops take a little bit longer to fully grow. One of those crops that seemingly take forever and a day to mature are tomatoes. Tomatoes are slow to grow. But they are also very valuable. The time spent to grow a crop or make a refined product reflects the value that product has on the market. It's a longer investment but a great way to make money with little work.

## Some More useful Solutions to play this game

If you sometimes ran out of water or some other good, then you have to plant all of your seed from that particular crop, just wait for it to grow and harvest it. If you have NONE left either in your silo or growing, you have the option of using diamonds to buy more of the crop, visit Greg or a friend and look in their roadside shops, or look in the newspaper for someone selling the crop.

If you want to feed the animals then, you need a feed mill that's available from the shop under the buildings tab. After building a Feed Mill, tap it and drag the type of animal feed you need to the Feed Mill. Animal feed is made from your basic crops, so plant and harvests more if you need to do so.

If you are searching for Indigo, Pumpkins, Chili and Tomatoes, then you should have high enough level to grow Indigo and other advanced crops, you can find them as follows; Tap an empty patch of field, the crop menu opens, tap the little switch button, with two arrows, at the bottom let corner of the crop menu, plant the crop you want by dragging it onto the field. To access your basic crops like wheat just tap the switch button again.

Know how Trees and Bushes Works. Unlike other crops, trees and Bushes don't require fields to grow on. You can plant them almost anywhere on your farm. They have a limited life span. You can only harvest them three times. After three harvests, the tree or bush wilts and needs special tending. You can ask your friends for help in reviving your wilted trees and bushes, which allows you to get one more harvest before the tree or bush wilts permanently. After that tree or bush must be chopped down to make room for new ones.

Just find that tomatoes are slow to grow, but they are also very valuable. The time spent to grow a crop or make a refined product reflects the value that product has on the market. It's a longer investment but a great way to make money.

To find building materials to increase storage space in your barn or silo, find that various building materials are lying around in various places, and you will occasionally find them while working the fields or tending your animals. You can also find building materials in Mystery Boxes hidden on your farm and friends' farms, or buy them with diamonds.

## Technical Support

To add friends to your friends bar, find that your friends bar shows both your Game Center and facebook friends who play Hay Day.

You need to use the Game Center app, available on all iPads, iPhones and iPod touch devices, to log into or create a new Game Center account. Use the Game Center app to add new friends, and they will appear on your Friends Bar in Hay Day.

Logging into Facebook from Hay Day automatically adds all your friends who play Hay Day to your Friends Bar. To save your farm and play in multiple iOS devices, log in Game Center before starting the game. Tap on the gear icon on the top left side of the screen and then tap on "Change Farm Name".

To Delete, Mode and Turn Objects, First tap and hold the object (remember, HOLD).

After you activate the menu, you can drag the object in order to move it, and if you tap on the rotate icon, you do just that, rotate the building in the same spot. You cannot delete buildings once installed.

To Trade obtain scarce items such as Mine and Expansion items (saws, axes, bolts, planks, etc) there's a great thread at the official forums, where you can list the items you have for sale and ready to exchange them for others you have missing.

Know that you cannot pause the game. Fortunately, animals don't die if you don't feed them.

To zoom out, pinch or swipe your thumb and index finger together on the screen. Swipe both fingers always when zooming in.

With the potential for growth in the future (an in-game river and dock displays "coming soon" when tapped on). Hay Day just might be the game to revive the farming genre, with controls that should serve as an example for other developers. Still, a farming game is still a farming game, so it will be up to you to decide whether or not you're ready to jump back into the barnyard.
